PROFESSIONAL SUMMARY

Strategic technical leader with proven experience driving platform modernization, mentoring high-performing teams, and delivering measurable business outcomes at scale. Seeking a Lead role to shape platform strategy and foster engineering excellence.

TECHNICAL SKILLS

Languages & Technologies: Java (8–17), Spring Boot, Spring 6, React.js, JavaScript, HTML, REST APIs, JSON, SQL

Cloud & DevOps Tools: Kubernetes, OpenShift, Pivotal Cloud Foundry, Microsoft Azure, Jenkins, GitHub Actions, SonarQube, Splunk Observability, HELM, Git

Concepts & Methodologies: Microservices, Service-Oriented Architecture, CI/CD, Agile (Scrum & Kanban), Software Testing, Generative AI

Databases: Oracle, MongoDB

Certifications: AZ-900 Microsoft Azure Fundamentals

WORK HISTORY

Wells Fargo

February 2026 – Present

Senior Software Engineer – SAVP — Charlotte, NC

Scope: Technical lead across 5 Scrum teams; acting Principal Engineer for enterprise fraud and claims modernization programs.

- Directed Business Continuity Planning (BCP) failover exercises across multiple data centers, routing live traffic with zero service interruption — eliminating all Sev-1/Sev-2 risk during critical maintenance windows.
- Architected enterprise-wide DC Exit migration (DCMS), transitioning heritage on-prem systems to modern cloud environments (NGDC) across 6+ microservices, increasing deployment frequency by 40% and reducing infrastructure overhead by 25%.
- Championed Generative AI adoption across 4 development teams by building a centralized knowledge hub and standardizing usage guidelines, increasing AI-driven solution delivery by 30% and eliminating ad hoc tooling sprawl.
- Owned critical production deployment lifecycles — acting as technical lead in the absence of Principal Engineers — achieving on-schedule delivery with zero deployment-attributable incidents across all supported programs.
- Integrated GitHub Copilot Agent/Edit modes into team workflows, accelerating code generation and review velocity while enforcing 100% test coverage across all Java and React services.
- Resolved complex technical impediments across 5 Scrum teams as primary SME, unblocking delivery and establishing architectural alignment throughout initial and continuous delivery phases.
- Built custom AI agents to streamline fraud remediation workflows and implemented automated pre-commit security checks, reducing manual review overhead and enforcing security standards at the commit level.
- Drove engineering culture growth through mentoring programs and internal AI/cloud awareness forums, resulting in a 20% increase in team adoption of best practices and actionable guidance for 50+ engineers.

Wells Fargo

February 2023 – January 2026

Software Engineer – AVP — Charlotte, NC

Scope: Core engineer on enterprise fraud and claims platform; technical SME across 5 Scrum teams during large-scale cloud modernization initiatives.

- Directed cloud migrations for 8+ Java and React applications — from on-prem VMs to PCF, then to Kubernetes/OCP — with zero downtime; authored Helm charts that standardized environment-specific deployments and reduced configuration-related defects by ~60%.
- Modernized a monolithic Java 8 / Spring Boot / JSP fraud platform into a distributed microservices architecture (Java 17, Spring 6, React micro-frontends), enabling on-demand deployments and improving mean time to recovery for enterprise fraud and claims systems.
- Built end-to-end CI/CD pipelines (Jenkins, SonarQube, Threadfix) and migrated monitoring to Splunk Observability Cloud, reducing mean time to detect (MTTD) by ~35% and automating security gate enforcement across all release cycles.
- Supported Business Continuity Planning (BCP) exercises, successfully validating data center failover, return, and Clean Rebuild Functional exercises to maintain operational resilience across all supported platforms.
- Integrated GitHub Copilot to generate test cases, refactor runtime-critical code, and identify security vulnerabilities (SQL injection, XSS, CSRF, insecure auth, data exposure), reducing debugging cycles by ~30% and achieving full security coverage across Java and React codebases.

- Mentored 5+ interns and junior developers through code reviews, pair programming, and tailored workshops on Java, Spring Boot, and cloud technologies; conducted technical interviews that contributed to building a high-performing engineering team.

Wells Fargo

January 2022 – January 2023

Technology Analyst - Analyst — Charlotte, NC

- Delivered consistently on-time across 3 Agile sprint cycles by actively driving stand-ups, sprint planning, and retrospectives — maintaining a clean record of meeting delivery commitments.
- Enhanced Spring Boot fraud claim processing codebases, improving application throughput and reducing defect rates across quarterly release cycles.
- Designed and executed test scripts validating application functionality, performance, and technical compliance — achieving zero critical production defects across 3 consecutive releases.
- Leveraged Splunk for real-time application monitoring and troubleshooting, resolving user-reported issues within SLA windows and improving system reliability for fraud and claims workflows.

Greenway Chemical Systems & Services

January 2012 – January 2022

IT Systems Administrator — Belmont, NC

- Scaled company IT infrastructure from startup to multi-state operation by redesigning client-facing websites and migrating to WordPress, directly supporting new client acquisition and sustained business growth across 3 locations.
- Engineered custom record-keeping programs and integrated physical security systems, streamlining internal workflows and improving office productivity across all sites.
- Managed network infrastructure, security protocols, and controller programming to maintain secure, reliable operations while delivering proactive client support.

EDUCATION

University of North Carolina at Charlotte

August 2021

Bachelor of Arts in Computer Science

Concentration: Information Technology | Minor: American Studies
