

Joseph Thompson

Charlotte, NC | (704) 576-8915 | joeythompson1014@gmail.com | linkedin.com/in/joseph-l-thompson | GitHub: jlthompson96

EDUCATION:

University of North Carolina at Charlotte, Charlotte, NC

August 2021

Bachelor of Arts in Computer Science | Concentration: Information Technology | Minor: American Studies

TECHNICAL SKILLS:

- **Languages & Technologies:** Java, Spring Boot, React.js, JavaScript, HTML, REST APIs, JSON, SQL
 - **Platforms & Tools:** Kubernetes, OpenShift Container Platform (OCP), Pivotal Cloud Foundry (PCF), Azure, Jenkins, SonarQube, Threadfix, Splunk, Splunk Observability Cloud, Git, GitHub Actions, Jira, HELM, Load Balancer Configuration
 - **Concepts & Methodologies:** Microservices, SOA, Agile (Scrum, Kanban), CI/CD, Object-Oriented Programming, Software Testing
 - **Databases:** Oracle, MongoDB
 - **Certifications:** AZ-900 Azure Fundamentals
-

WORK HISTORY:

Wells Fargo

January 2022 - Current

Software Engineer - AVP, Charlotte, NC

- **Spearheaded** multiple high-impact cloud migrations, seamlessly transitioning from on-premises VMs to Pivotal Cloud Foundry (PCF) and later pivoting to a robust Kubernetes-based architecture on OpenShift Container Platform (OCP). Directed the seamless relocation of Java and React components while expertly configuring Helm charts to streamline environment-specific deployments and enhance operational efficiency.
- **Pioneered** the modernization of a monolithic Java 8 Spring Boot application with legacy JSP architecture into a scalable microservices architecture leveraging Java 17, Spring 6, and React.js micro frontends; conducted extensive research on migration best practices, troubleshooted complex compatibility and integration issues, and optimized configurations to enhance performance and maintainability for enterprise fraud and claims systems.
- **Architected** CI/CD pipelines using Jenkins, SonarQube, and Threadfix while migrating microservices monitoring from ElasticAPM to Splunk Observability Cloud, automating deployments, enforcing code quality, and enhancing alerting for enterprise fraud and claims applications.
- **Provided ongoing support** to multiple Scrum teams during application modernization, resolving impediments and facilitating knowledge sharing to ensure smooth development and integration of modernized components.
- **Supported** Business Continuity Planning (BCP) exercises, ensuring successful data center failover and return, and validated Clean Rebuild Functional exercises to maintain operational resilience.
- **Leveraged** GitHub Copilot to generate test cases, refactor code for runtime efficiency, identify and mitigate security vulnerabilities (e.g., SQL injection, XSS, CSRF, insecure authentication, data exposure), and resolve errors rapidly reducing development/testing time, minimizing debugging, accelerating cycles, and enhancing security for Java and React-based applications.
- **Mentored** interns and junior developers through hands-on code reviews, pair programming sessions, and tailored skill-building workshops on Java, Spring Boot, and cloud technologies; conducted technical interviews to assess candidates, and fostered a collaborative environment that accelerated team onboarding, reduced knowledge gaps, and contributed to delivering high-performing, resilient enterprise applications.

IT Systems Administrator, Belmont, NC

- **Drove** company growth from startup to multi-state operation by redesigning and developing client-facing websites, migrating to WordPress for enhanced flexibility, and attracting new clients through improved online presence.
- **Engineered** custom record-keeping programs and integrated security systems, collaborating with operations to streamline workflows and boost office productivity.
- **Managed** network infrastructure and security protocols, ensuring secure, efficient operations while programming controllers and providing client support to maintain system reliability.
- **Led** customer seminars on technology operations and conducted routine check-ins, enhancing client relations and resolving issues proactively.

COURSE PROJECTS:

Web Based App Design and Development – Final Website Project (UNC Charlotte) August 2019 – December 2019

- **Created and developed** a website using HTML5, CSS3, JavaScript.
- **Implemented** jQuery, AJAX and JSON components to display various data across the website.

Software Engineering – Know Social (UNC Charlotte) August 2019 – December 2019

- **Worked and collaborated** with a group of 4 others to design and develop an application that pulls data from twitter analyzes the tweets and displays whether the sentiment of the tweet is positive or negative.
- **Implemented technologies** such as Java, JavaFX, JDBC, SQL, and various APIs to pull data from Twitter and analyze the tweets.

Database Design and Implementation – Database Project (UNC Charlotte) August 2020 – December 2020

- **Developed and created** a database using the MySQL language, workbench, as well as and database design methodologies.
- **Designed** relational models and EERD diagrams using DRAW.IO to demonstrate the relationships between objects in the database design.

Software Development Senior Capstone Project – 9erPark (UNC Charlotte) January 2021 – March 2021

- **Collaborated** on an iOS application with a team of 5 to display UNC Charlotte parking deck data to the user.
- **Programmed** the application with the Swift programming language as well as the XCode IDE.
- **Conceptualized and designed** lo-fi and hi-fi prototypes using Balsamiq and Figma.
- **Collaborated and maintained** using Git and GitHub for version control management.
